# Business Statistics \& Mathematics Punjab University B.Com Part 1 Solved Past Papers 

## SOLVED PAPER 2013

## QUESTION NO. 1

| Weight | $\mathbf{f}$ | $\mathbf{x}$ | $\mathbf{f x}$ | $\mathbf{f x}^{2}$ |
| :---: | :---: | :---: | :---: | :---: |
| $118-126$ | 20 | 122 | 2440 | 297680 |
| $127-135$ | 35 | 131 | 4585 | 600635 |
| $136-144$ | 49 | 140 | 6860 | 960400 |
| $145-153$ | 32 | 149 | 4768 | 710432 |
| $154-162$ | 25 | 158 | 3950 | 624100 |
| $163-171$ | 14 | 167 | 2338 | 390446 |
|  | $\mathbf{1 7 5}$ |  | $\sum \mathbf{f x}=\mathbf{2 4 9 4 1}$ | $\sum \mathbf{f x}^{2}=\mathbf{3 5 8 3 6 9 3}$ |

Pearson's coefficient of skewness $\quad=\frac{3(\text { Mean }- \text { Median })}{S . D}$

$$
\begin{aligned}
& =\frac{3(142.52-141.47)}{12.896} \\
& =\frac{3.15}{12.896} \\
& =0.244
\end{aligned}
$$

$$
\text { Bowley's coefficient of skewness } \begin{aligned}
&=\frac{Q_{3}+Q_{1}-2 \text { Median }}{Q_{3}-Q_{1}} \\
&=\frac{152.16+132.61-2(141.47)}{152.16-132.61} \\
&=\frac{1.834}{19.554} \\
&=0.0938
\end{aligned}
$$

$$
\begin{aligned}
& \text { Arithmetic mean }=\overline{\mathrm{x}} \\
&=\frac{\sum \mathrm{fx}}{\sum \mathrm{f}} \\
&=\frac{24941}{175}=142.52 \\
& \text { Standard Deviation }= \sqrt{\frac{\sum f x^{2}}{\sum \mathrm{f}}-\left(\frac{\sum \mathrm{fx}}{\sum \mathrm{f}}\right)^{2}} \\
&=\sqrt{\frac{3583693}{175}-\frac{24941}{175}} \\
&=\sqrt{\frac{3583693}{175}-\frac{24941}{175}} \\
&=\sqrt{20478.24571-20311.9504}
\end{aligned}
$$

# Business Statistics \& Mathematics Punjab University B.Com Part 1 Solved Past Papers 

$$
\begin{array}{ll} 
& =\sqrt{166.29531} \\
\text { S.D. } & =12.869
\end{array}
$$

For median and quartiles, we consider the following table:

| Weight | C.B. | F | C.f |  |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 118-126 \\ & 127-135 \\ & 136-144 \\ & 145-153 \\ & 154-162 \\ & 163-171 \end{aligned}$ | 117.5-126.5 | 20 | 20 | $\begin{array}{ll} \rightarrow & Q_{1} \\ \rightarrow & \text { Median } \\ \rightarrow & Q_{3} \end{array}$ |
|  | 126.5-135.5 | 35 | 55 |  |
|  | 135.5-144.5 | 49 | 104 |  |
|  | 144.5-153.5 | 32 | 136 |  |
|  | 153.5-162.5 | 25 | 161 |  |
|  | 162.5-171.5 | 14 | 175 |  |
| $\text { Median } \quad=l+\frac{h}{f}\left(\frac{n}{2}-c\right)$ |  |  |  |  |
| $\frac{n}{2} \quad=\frac{175}{2}=87$ |  |  |  |  |
| $1 \quad=135.5$ |  |  |  |  |
| $\mathrm{h} \quad=9$ |  |  |  |  |
| $\mathrm{f} \quad=49$ |  |  |  |  |
| C $\quad=55$ |  |  |  |  |
| Median | $=135.5+\frac{9}{49}(87.5-55)$ |  |  |  |
|  | $=134.5+5.969$ |  |  |  |
| Median $\quad=141.47$ |  |  |  |  |
| $\mathrm{Q}_{1} \quad=l+\frac{h}{f}$ |  |  |  |  |
| $\underline{n}$ | $=\frac{175}{4}=43.75$ |  |  |  |
| 1 | $=126.5$ |  |  |  |
| h | $=9$ |  |  |  |
| f | $=35$ |  |  |  |
| C | $=20$ |  |  |  |
| Q ${ }_{1}$ | $=126.5+\frac{9}{35}(43.75-20)$ |  |  |  |
|  | $=126.5$ |  |  |  |

# Business Statistics \& Mathematics Punjab University <br> B.Com Part 1 Solved Past Papers 

$$
\mathrm{Q}_{1} \quad=132.61
$$

$$
\begin{array}{ll}
\mathrm{Q}_{3} & =l+\frac{h}{f}\left(\frac{3 n}{4}-c\right) \\
\frac{3 n}{4} & =\frac{3 \times 175}{4}=131.25 \\
\mathrm{Q}_{3} & =144.5+\frac{9}{32}(131.25-104) \\
& =144.5+7.664 \\
\mathrm{Q}_{3} & =152.16
\end{array}
$$

## QUESTION NO. 2

| Commodity | 2008 |  | 2012 |  | $\mathbf{p}_{\text {n }} \mathbf{q}_{\mathbf{o}}$ | $\mathbf{p}_{0} \mathbf{q}_{0}$ | $\mathrm{p}_{\mathrm{n}} \mathrm{q}_{\mathrm{n}}$ | $\mathbf{p}_{0} \mathbf{q}_{\text {n }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{p}_{0}$ | $\mathrm{q}_{0}$ | $\mathrm{p}_{\mathrm{n}}$ | $\mathrm{q}_{\mathrm{n}}$ |  |  |  |  |
| A | 5.0 | 80 | 8.7 | 100 | 696 | 400 | 870 | 500 |
| B | 3.6 | 90 | 5.7 | 95 | - 513 | 324 | 541.5 | 342 |
| C | 3.1 | 20 | 4.6 | 30 | 92 | 92 | 138 | 93 |
|  |  |  |  | , | 1301 | 786 | 1549.5 | 935 |

Laspreyr's price index

Paasche's price index

$$
\begin{aligned}
& =\frac{\sum p_{n} q_{o}}{\sum p_{o} q_{o}} \times 100 \\
& =\frac{1301}{786} \times 100 \\
& =165,52 \\
& =\frac{\sum p_{n} q_{n}}{\sum p_{o} q_{n}} \times 100 \\
& =\frac{1549.5}{935} \times 100 \\
& =165.72
\end{aligned}
$$

Marshall's price index $\quad=\frac{\sum p_{n} q_{o}+\sum p_{n} q_{n}}{\sum p_{o} q_{o}+\sum p_{o} q_{n}} \times 100$

$$
=\frac{1301+1549.5}{786+935} \times 100
$$

$$
=\frac{280.5}{1721} \times 100
$$

$$
=165.63
$$

# Business Statistics \& Mathematics Punjab University B.Com Part 1 Solved Past Papers 

Fisher's price index

$$
\begin{aligned}
& =\sqrt{\text { Laspeyre's index } \times \text { Paasche's index }} \\
& =\sqrt{165.52 \times 165.72} \\
& =165.621
\end{aligned}
$$

## QUESTION NO. 3

(i) $\quad \mathrm{H}_{0}: \quad$ Income and type of school are independent.
$\mathrm{H}_{\mathrm{I}}$ : Income and type of school are dependent.
(ii) Level of significance $=\alpha=5 \%=0.05$
(iii) Test statistic following $x^{2}$ distribution at 1 d.f. $x^{2}=\sum \frac{(O-E)^{2}}{E}$
(iv) Critical Region:

$$
\begin{aligned}
& x_{c a l}^{2} \geq x_{t a b}^{2} \\
& x_{c a l}^{2} \geq 3.84
\end{aligned}
$$

| Income | Private | Government | Total |
| :---: | :---: | :---: | :---: |
| High | $\frac{1000 \times 656}{1600}=410$ | $\frac{1000 \times 944}{1600}=590$ | 1000 |
| Low | $\frac{600 \times 656}{1600}=246$ | $\frac{600 \times 944}{1600}=354$ | 600 |
|  | 656 | 944 | 1600 |

Calculation of $x^{2}$ value is shown below

| O (Observed <br> Frequency) | E (Expected <br> Frequency) | $\mathbf{O}-\mathbf{E}$ | $\mathbf{( O - ~ E ) ~}^{\mathbf{2}}$ | $(\mathbf{O}-\mathbf{E})^{\mathbf{2}} / \mathbf{E}$ |
| :---: | :---: | :---: | :---: | :---: |
| 494 | 410 | 84 | 7056 | 17.20976 |
| 506 | 590 | -84 | 7056 | 11.95932 |
| 162 | 246 | -84 | 7056 | 28.68293 |
| 438 | 354 | 84 | 7056 | 19.93220 |
|  |  |  |  | $\mathbf{7 7 . 7 8 4 2 1}$ |

Conclusion: Since $x_{\text {cal }}^{2}=77.78>3.84$ so it falls in critical region, we reject $\mathrm{H}_{0}$ and conclude that income and type of school are dependent.

# Business Statistics \& Mathematics Punjab University B.Com Part 1 Solved Past Papers 

## QUESTION NO. 4

(i)

Population elements $=0,3,6,12,15,18$
Population Size $\quad=\mathrm{N}=6$
Sample Size $\quad=n=3$
Let $x$ denotes the element of population

| $\mathbf{X}$ | $\mathbf{X}^{\mathbf{2}}$ |
| :---: | :---: |
| 0 | 0 |
| 3 | 9 |
| 6 | 36 |
| 12 | 144 |
| 15 | 225 |
| 18 | 324 |
| $\sum \mathrm{X}=54$ | $\sum \mathrm{X}^{2}=738$ |

Population mean $\boldsymbol{\mu}=\frac{\sum \mathrm{X}}{\mathrm{N}}=\frac{54}{6}=9$
Population Variance $=\sigma^{2}=\frac{\sum X^{2}}{N}-\left(\frac{\Sigma X}{N}\right)^{2}$

$$
\sigma^{2}=\frac{738}{6}-(9)^{2}=123-81=42
$$

Number of all possible samples without replacement $={ }^{\mathrm{N}} \mathrm{C}_{\mathrm{n}}={ }^{6} \mathrm{C}_{3}=20$
Sample with corresponding means are given below:

| Samples | Sample mean $(\overline{\mathbf{x}})$ | Samples | Sample mean $(\overline{\mathbf{x}})$ |
| :---: | :---: | :---: | :---: |
| $0,3,6$ | 3 | $3,6,12$ | 7 |
| $0,3,12$ | 5 | $3,6,15$ | 8 |
| $0,3,15$ | 6 | $3,6,18$ | 9 |
| $0,3,18$ | 7 | $3,12,15$ | 10 |
| $0,6,12$ | 6 | $3,12,18$ | 11 |
| $0,6,15$ | 7 | $3,15,18$ | 12 |
| $0,6,18$ | 8 | $6,12,15$ | 11 |
| $0,12,15$ | 9 | $6,12,18$ | 12 |
| $0,12,18$ | 10 | $6,15,18$ | 13 |
| $0,15,18$ | 11 | $12,15,18$ | 15 |

# Business Statistics \& Mathematics Punjab University B.Com Part 1 Solved Past Papers 

## Sampling distribution of means is given below:

| $\overline{\mathbf{x}}$ | $\mathbf{f}$ | $\mathbf{P}(\overline{\mathbf{x}})$ | $\overline{\mathbf{x}} \cdot \mathbf{P}(\overline{\mathbf{x}})$ | $\overline{\mathbf{x}}^{\mathbf{2}} \cdot \mathbf{P}(\overline{\mathbf{x}})$ |
| :---: | :---: | :---: | :---: | :---: |
| 3 | 1 | $1 / 20$ | $3 / 20$ | $9 / 20$ |
| 5 | 1 | $1 / 20$ | $5 / 20$ | $25 / 20$ |
| 6 | 2 | $2 / 20$ | $12 / 20$ | $72 / 20$ |
| 7 | 3 | $3 / 20$ | $21 / 20$ | $147 / 20$ |
| 8 | 2 | $2 / 20$ | $16 / 20$ | $128 / 20$ |
| 9 | 2 | $2 / 20$ | $18 / 20$ | $162 / 20$ |
| 10 | 2 | $2 / 20$ | $20 / 20$ | $200 / 20$ |
| 11 | 3 | $3 / 20$ | $33 / 20$ | $363 / 20$ |
| 12 | 2 | $2 / 20$ | $24 / 20$ | $288 / 20$ |
| 13 | 1 | $1 / 20$ | $13 / 20$ | $169 / 20$ |
| 15 | 1 | $1 / 20$ | $15 / 20$ | $225 / 20$ |
|  | $\sum \mathbf{f}=\mathbf{2 0}$ |  | $\mathbf{1 8 0 / 2 0}$ | $\mathbf{1 7 8 8 / 2 0}$ |

Mean of sampling distribution of means

$$
\mu_{\overline{\mathrm{x}}} \quad=\overline{\mathrm{x}} \cdot \mathrm{P}(\overline{\mathrm{x}}) \quad=\frac{180}{20}=9
$$

Variance of sampling Distribution

$$
\begin{aligned}
& \sigma_{\overline{\mathrm{x}}}^{2} \quad=\sum \overline{\mathbf{x}}^{2} \mathbf{P}(\overline{\mathbf{x}})-\left[\sum \overline{\mathbf{x}} \mathbf{P}(\overline{\bar{x}})\right]^{2} \\
&=\frac{1788}{20}-(9)^{2} \\
&=89.4-81 \\
& \sigma_{\overline{\mathrm{x}}}^{2} \quad=8.4
\end{aligned}
$$

(i) Relationship between sampling distribution of the means $\mu_{\overline{\mathrm{x}}}$ and population mean ( $\mu$ ) is:

Verification:

$$
\mu_{\overline{\mathrm{x}}} \quad=\mu
$$

Verification:

$$
\mu_{\overline{\mathrm{x}}}=9, \mu=9
$$

Hence, $\mu_{\overline{\bar{x}}} \quad=\mu$ (Both are equal)

## Business Statistics \& Mathematics Punjab University <br> B.Com Part 1 Solved Past Papers

(ii) Relationship between variance of sampling distribution ( $\sigma_{\overline{\mathrm{x}}}{ }^{2}$ ) and population variance $\sigma^{2}$ is:

$$
\sigma_{\overline{\mathrm{x}}}^{2} \quad=\frac{\sigma^{2}}{\mathrm{n}} \cdot \frac{\mathrm{~N}-\mathrm{n}}{\mathrm{~N}-1}
$$

Verification: Since, $\quad \sigma_{\overline{\mathrm{x}}}{ }^{2}=8.4$

$$
\begin{aligned}
& \text { And } \frac{\sigma^{2}}{\mathrm{n}} \cdot \frac{\mathrm{~N}-\mathrm{n}}{\mathrm{~N}-1} \\
& \begin{aligned}
=\frac{42}{3} & \times \frac{6-3}{6-1} \\
& =14 \times \frac{3}{5} \\
& =8.4
\end{aligned}
\end{aligned}
$$

So,

$$
\sigma_{\overline{\mathrm{x}}}{ }^{2} \quad=\frac{\sigma^{2}}{\mathrm{n}} \cdot \frac{\mathrm{~N}-\mathrm{n}}{\mathrm{~N}-1}=8.4 \text { Verified }
$$

## QUESTION NO. 5

$$
\begin{aligned}
& A=\left[\begin{array}{ccc}
1 & 3 & 5 \\
4 & -2 & 7 \\
3 & 2 & -4
\end{array}\right] \\
& |A|=\left|\begin{array}{ccc}
1 & 3 & 5 \\
4 & -2 & 7 \\
3 & 2 & -4
\end{array}\right|
\end{aligned}
$$

Expanding from $1^{\text {st }}$ Row:

$$
\begin{aligned}
& |A|=1\left|\begin{array}{cc}
-2 & 7 \\
2 & -4
\end{array}\right|-3\left|\begin{array}{cc}
4 & 7 \\
3 & -4
\end{array}\right|+5\left|\begin{array}{cc}
4 & -2 \\
3 & 2
\end{array}\right| \\
= & 1(8-14)-3(-16-21)+5(8+6) \\
= & 1(-6)-3(-37)+5(14)
\end{aligned}
$$

# Business Statistics \& Mathematics Punjab University <br> B.Com Part 1 Solved Past Papers 

$=-6+111+70$
$|A|=175$
$\operatorname{Adj} A=\left(\begin{array}{c}\left|\begin{array}{cc}-2 & 7 \\ 2 & -4\end{array}\right|-\left|\begin{array}{cc}4 & 7 \\ 3 & -4\end{array}\right|+\left|\begin{array}{cc}4 & -2 \\ 3 & 2\end{array}\right| \\ -\left|\begin{array}{cc}3 & 5 \\ 2 & -4\end{array}\right|\left|\begin{array}{cc}1 & 5 \\ 3 & -4\end{array}\right|-\left|\begin{array}{cc}1 & 3 \\ 3 & 2\end{array}\right| \\ \left|\begin{array}{cc}3 & 5 \\ -2 & 7\end{array}\right|-\left|\begin{array}{cc}1 & 5 \\ 4 & 7\end{array}\right|-\left|\begin{array}{cc}1 & 3 \\ 4 & -2\end{array}\right|\end{array}\right)^{\mathrm{t}}$
$=\left[\begin{array}{ccc}(8-14) & -(-16-21) & (8+6) \\ -(-12-10) & (-4-15) & -(2-9) \\ (21+10) & -(7-20) & (-2-12)\end{array}\right)^{t}$
$=\left[\begin{array}{ccc}-6 & 37 & 14 \\ 22 & -19 & 7 \\ 31 & 13 & -14\end{array}\right]^{\mathrm{t}}$
After taking Transpose
Adj $\mathrm{A}=\left[\begin{array}{ccc}-6 & 22 & 31 \\ 37 & -19 & 13 \\ 14 & 7 & -14\end{array}\right]$

$$
\mathrm{A}^{-1}=\frac{1}{|A|} \operatorname{adj} . \text { (A) }
$$

$$
=\frac{1}{175}\left[\begin{array}{ccc}
-6 & 22 & 31 \\
37 & -19 & 13 \\
14 & 7 & -14
\end{array}\right]
$$

# Business Statistics \& Mathematics Punjab University <br> B.Com Part 1 Solved Past Papers 

2009-2018
$=\left[\begin{array}{ccc}\frac{-6}{175} & \frac{22}{175} & \frac{31}{175} \\ \frac{37}{175} & \frac{-19}{175} & \frac{13}{175} \\ \frac{14}{175} & \frac{7}{175} & \frac{-14}{175}\end{array}\right]$

## QUESTION NO. 6

(a) $\quad 4 x-3 y=10$

$$
5 x-7 y=6
$$

Multiplying eq. (1) by 5 and eq. (2) by 4 and then subtracting the resultant equations:
Or (i) 20x $=15 \mathrm{y} \quad=50$

$$
\text { (ii) } \begin{aligned}
-20 x \pm 28 y & =24 \\
13 y & =26 \\
y & =\frac{26}{13}=2
\end{aligned}
$$

By putting the value of $y$ in equation (i):

$$
\begin{array}{ll}
4 \mathrm{x}-3(2) & =10 \\
4 \mathrm{x}-6 & =10 \\
4 \mathrm{x} & =10+6 \\
4 \mathrm{x} & =16 \\
\mathrm{x} & =16 / 4 \\
\mathrm{x} & =4
\end{array}
$$

Hence, Solution set $=\{[4,2]\}$

## QUESTION NO. 6

(b) Let,

Length of rectangular plot $=x$ yards
Width of rectangular plot $=y$ yards
Area of rectangular plot $=2000$ sq.yards
$\mathrm{xy}=2000$

Total length of the fencing $=180$ yards $=$ Perimeter

$$
\begin{array}{ll}
2 \mathrm{x}+2 \mathrm{y}= & 180 \\
2(\mathrm{x}+\mathrm{y})= & 180 \\
\mathrm{X}+\mathrm{Y}= & 180 / 2 \\
\mathrm{X}+\mathrm{y}=90
\end{array}
$$

From eq. (2)

$$
Y \quad=90-x
$$

Putting in rq. (1):
$X(90-x)=2000$
$90 x-x^{2}=2000$

Or $\quad \mathrm{x} 2-90 \mathrm{x}+2000=0$

| a | $=$ | 1 |
| :--- | :--- | :--- |
| b | $=$ | -90 |
| c | $=$ | 2000 |

# Business Statistics \& Mathematics Punjab University 

$$
\begin{aligned}
\mathrm{x} & =\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a} \\
& =\frac{-(-90) \pm \sqrt{(-90)^{2}-4(1)(2000)}}{2(1)} \\
& =\frac{90 \pm \sqrt{8100-8000}}{2}
\end{aligned}
$$

$$
=\frac{90 \pm \sqrt{100}}{2}
$$

$$
=\quad \frac{90 \pm 10}{2}
$$

$$
\mathrm{X}=\frac{90+10}{2}, \quad \mathrm{X}=\frac{90-10}{2}
$$

$$
=\frac{100}{2} \quad, \quad, \quad=\frac{80}{2}
$$

$$
50
$$

40

For $\mathrm{X}=50$

Putting in $y=90-x$

$$
\begin{aligned}
& =90-50 \\
\mathrm{Y} & =40
\end{aligned}
$$

For $\mathrm{X}=40$

Putting in $y=90-x$

$$
=90-40
$$

# Business Statistics \& Mathematics Punjab University <br> B.Com Part 1 Solved Past Papers 

$$
Y=50
$$

Hence,

| If length of the plot | $=$ | 50 yards |
| :--- | :--- | :--- |
| Then width of the plot | $=$ | 40 Yards |

And if
If length of the plot $=40$ yards
Then width of the plot $=50$ Yards

## QUESTION NO. 7

(a) The given geometric series is:

$$
\begin{aligned}
& 1,-\frac{1}{2}, \frac{1}{4},-\frac{1}{8}, \frac{1}{16},-\frac{1}{32}, \ldots \ldots \ldots \\
& \mathrm{a}=1
\end{aligned}
$$

Common ratio $=\quad \frac{-1 / 2}{1}=-\frac{1}{2}=\mathrm{r}$
Since, $|r|=|-1 / 2|<1$
So, we use the formula for sum as:

$$
\begin{array}{cccc}
\text { Where } & \begin{array}{ccc}
\mathrm{S}_{\mathrm{n}} & = & \mathrm{a}\left(\frac{a-r n}{1-r}\right) \\
\mathrm{a} & = & 1 \\
\mathrm{r} & = & -\frac{1}{2} \\
\mathrm{n} & = & 10
\end{array} \\
\mathrm{~S}_{10}= & \frac{1-\left(-\frac{1}{2}\right) 10}{1-\left(-\frac{1}{2}\right)} \\
= & \left(\frac{1-\frac{1}{2} 10}{1+\frac{1}{2}}\right)
\end{array}
$$

# Business Statistics \& Mathematics Punjab University <br> B.Com Part 1 Solved Past Papers 

$$
\begin{aligned}
& =\quad \frac{\left(1-\frac{1}{1024}\right)}{\frac{3}{2}} \\
& =\quad \frac{\left(\frac{1024-1}{1024}\right)}{\frac{3}{2}} \\
& =\left(\frac{1023}{1024}\right) \times \frac{3}{2} \\
& \mathrm{~S}_{10}=\left(\frac{341}{512}\right)
\end{aligned}
$$

Hence, Sum of 10 terms of geometric series is $\frac{341}{512}$
(b) $1^{\text {st }}$ alternative of the executive $\quad=\quad$ Rs. 240,000
$2^{\text {nd }}$ Alternative can be written in monthly sequence for first month, $2^{\text {nd }}$ month, $3^{\text {rd }}$ month, etc as below:

Rs. 100 , Rs. 200 , Rs. $400, \ldots \ldots$ upto 12 terms.

This makes a geometric sequence where:

$$
\begin{array}{ll}
\mathrm{a} & =100 \\
\mathrm{r} & =\frac{200}{100}=2 \\
\mathrm{n} & =12
\end{array}
$$

Sum of 12 month salary $=\mathrm{S}_{\mathrm{n}}=\frac{a\left(r^{\mathrm{n}}-1\right)}{r-1}$

$$
=\quad \frac{100\left(2^{12}-1\right)}{2-1}
$$

$$
=100(4096-1)
$$

$$
=100(4095)
$$

$$
=\text { Rs. } 409,500
$$

# Business Statistics \& Mathematics Punjab University B.Com Part 1 Solved Past Papers 

Per year salary for $1^{\text {st }}$ alternative $=\quad$ Rs. 240,000
Per year salary for $2^{\text {nd }}$ alternative $=\quad$ Rs. 409,500
Since, Rs. $409,500>$ Rs. 240,000
The executive should prefer $2^{\text {nd }}$ alternative.

## QUESTION NO. 8

(a) Principal amount $=P \quad=$ Rs. 4,500
Rate of interest for $1^{\text {st }}$ year $r \quad=4 \%$
Compound amount after first year $=P(1+r)^{\mathrm{n}}$
Where $\mathrm{m}=1$ We have:

$$
=4500(1+0.04)^{1}
$$

$$
=4500(1.04)
$$

$$
=\text { Rs. } 4680
$$

Principal amount for $2^{\text {nd }}$ Year $=\quad P \quad=$ Rs. 4680
Rate of interest for $2^{\text {nd }}$ year $r \quad=5 \%$
Compound amount after $2^{\text {nd }}$ year $\quad=\mathrm{P}(1+\mathrm{r})^{\mathrm{n}}$
$=4680(1+0.05)$
$=4680(1.05)$
$=$ Rs. 4914
Principal amount for $3^{\text {rd }}$ Year $\quad=\quad \mathrm{P} \quad=$ Rs. 4914
Rate of interest for $3^{\text {rd }}$ year $r=6 \%$
Compound amount after $3^{\text {rd }}$ year $\quad=\mathrm{P}(1+\mathrm{r})^{\mathrm{n}}$
$=4914(1+0.06)$
$=4914(1.06)$
$=$ Rs. 5208.84
Hence, Compound interest for 3 Years $=5208.84-4500$

$$
=\quad \text { Rs. } 708.84
$$

## Business Statistics \& Mathematics Punjab University B.Com Part 1 Solved Past Papers

(b) Since the investment of equal size made at the end of each quarter, and we have to find the accumulated value. The problem is related to sum of ordinary annuity we have

$$
\begin{aligned}
& \mathrm{R}=\text { Rs. } 5000 \text { (Each Periodic Payment) } \\
& \mathrm{I}=8 \% / 4=2 \%=0.02 \text { ( Quarterly Interest Rate) } \\
& \mathrm{n}-5 \times 4=20 \text { Quarters ( Number of conversion periods) }
\end{aligned}
$$

So, the required accumulated value is given by the formula:
$\mathrm{S}_{\mathrm{n}}=\mathrm{R}\left[\frac{(1+i)^{n}-1}{i}\right]$
$\mathrm{S}_{\mathrm{n}}=5000\left[\frac{(1+0.02)^{20}-1}{0.02}\right]$
$\mathrm{S}_{\mathrm{n}}=5000\left[\frac{(1.02)^{20}-1}{0.02}\right]$
$\mathrm{S}_{\mathrm{n}}=$ Rs. 121486.849
